

# IK-301 Installer Kit

---

## Getting Started

The IK-301 Installer Kit contains the tools used during an Ibis System installation. Note that the Installer Kit does not include IntelliGateways or IntelliSockets to install—those are sold separately.

A full installation tutorial can be found at <https://ibis.io> in the documentation section. In order to access ibis.io you will need to use the account credentials provided to you by Ibis Networks. The installation tutorial will make references to an **admin organization**—the name of your admin organization is listed below.

The kit also contains an *Ibis Installer* product key. The *Ibis Installer* is an application that will be used during Ibis System installations, and can be downloaded from ibis.io. You will be prompted for the product key during initial application setup.

## Packing List

Quantity	Item
1	IG-301 Installation Dongle
1	USB-to-serial cable
1	<i>Ibis Installer</i> product key

## Admin Organization

Your admin organization on ibis.io is:
